USER INFORMATION POINT MANAGEMENT SYSTEM AND METHOD USING COMMUNICATION NETWORK

)Abstract:

PROBLEM TO BE SOLVED: To obtain a point in each reading of a home page and to give an incentive to a user in accordance with points by enabling a user to access a home page through a communication network, transmit user information and register the information in a data base of administrative organization.

LUTION: An electronic coupon system is constituted of connecting a WWW server 28 or the like in a system participation group 30 to a WWW server 23, a mail server 24 or the like in the administrative organization 27 through an interconnection network (Internet) 22. A user 21 is connected to the WWW server 28 or the like in the group 30 through the Internet 22 to use the coupon system. The mail server 24 is connected to a data base 26 in the organization 27 through a secret holding device 25. Communication service using states such as the reading of home pages and commodity purchase in the group 30 are unitarily stored in the data base 26 and the group 30 can access the data base 26 and check the using states.

AIMS

aim(s)]

aim 1] In the User Information point managerial system constituted by the management organization, participating organization, and user who were connected in the communication network The server of this management organization receives User Information which opened the homepage and was transmitted by the user, The server of this participating organization that opens a homepage and has the homepage of this management organization as a link page, The mail server of this management organization that receives User Information transmitted from the server of the management organization, Register User Information received by this mail server, and an ID number is transmitted to the user who registered. The User Information point managerial system using the communication network by which it is having-database of this management organization that memorizes the point which acquires whenever user who registered uses homepage of this management organization or participating organization, and is added characterized.

aim 2] In the User Information point management method for the management organization, participating organization, and user who were connected in the communication network The 1st step to which a user accesses the homepage of this management organization using this communication network, and transmits User Information, The 1st step which registers transmitted User Information into the database of this management organization, and gives an ID number to the user who registered, The 3rd step which memorizes the point which acquires whenever the user who registered uses the homepage of this management organization or a participating organization, and is added in the database of this management organization, The User Information point management method using the communication network by which it is having [the user who registered]-4th step which acquires privilege according to the point characterized.

aim 3] In the User Information point management method for the management organization, participating organization, and user who were connected in the communication network The 1st step to which a user peruses the homepage of this participating organization using a communication network, The 2nd step which changes a link place on the homepage of this participating organization to the homepage of this management organization, The 3rd step to which a user transmits User Information in the homepage of this management organization, The 4th step which registers transmitted User Information into the database of this management organization, and gives an ID number to the user who registered, The 5th step which memorizes the point which acquires whenever the user who registered uses the homepage of this management organization or a participating organization, and is added in the database of this management organization, The User Information point management method using the communication network by which it is having [the user who registered]-6th step which acquires privilege according to the point characterized.

aim 4] They are the User Information point managerial system using the communication network characterized by at said point is acquired in claims 1-3 when said user who registered peruses the homepage of said management organization or a participating organization through a communication network, and it is added, and is memorized by the database of said management organization, or the User Information point management method.

aim 5] They are the User Information point managerial system using the communication network characterized by at said point is acquired in claims 1-3 when said user who registered provides the homepage of said management organization or a participating organization with User Information through a communication network, and it is added, and is memorized by the database of said management organization, or the User Information point management method.

aim 6] They are the User Information point managerial system using the communication network characterized by at a user receives said point by said registration or tariff payment in claims 1-3, it will subtract if said user who registered carries out the game which said management organization or a participating organization establishes through communication network, and it is further added according to the result of a game, and is memorized by the database of said management organization, or the User Information point management method.

://www4.ipdl.jpo.go.jp/cgi-bin/tran_web CGI-ejje?u=http%3A%2F%2Fwww4.ipdl.jpo.go.jp%2FTokuji... 8/9/2004

aim 7] They are the User Information point managerial system using the communication network characterized by it. it will subtract if a user receives said point by said tariff payment in claims 1-3 and said user who registered uses the homepage of said management organization or a participating organization through a communication network, and is memorized by the database of said management organization, or the User Information point management method.

aim 8] Said point is the User Information point managerial system using the communication network characterized by adding him if said user who registered purchases the goods of the homepage of said management organization or a participating organization through a communication network in claims 1-3, and being memorized by the database of said management organization, or the User Information point management method.

aim 9] In the User Information point managerial system constituted by the management organization connected in communication network, a participating organization, a participating organization, and the user The server of this management organization that receives User Information which opened the homepage and was transmitted by the user, the server of the participating organization which opens a homepage and has the homepage of this management organization as a link place, The participating organization which can link from the homepage of this management organization, and the mail server of this management organization that receives User Information transmitted from the server of this management organization, Register User Information received by this mail server, and an ID number is transmitted to the user who registered. The database of this management organization that memorizes the point which requires whenever it peruses the homepage of a participating organization which the user who registered made link on the homepage of this management organization, a participating organization, or this management organization, and added, The User Information point managerial system using the communication network by which it is ****(ing) characterized.

aim 10] In the User Information point management method for the management organization connected in the communication network, a participating organization, a participating organization, and a user The 1st step to which a user accesses the homepage of this management organization using this communication network, and transmits User Information, The 2nd step which registers transmitted User Information into the database of this management organization, and gives an ID number to the user who registered, The 3rd step which memorizes the point which requires whenever it peruses the homepage of a participating organization which the user who registered made link on the homepage of this management organization, a participating organization, or this management organization, and added in the database of this management organization, The User Information point management method using the communication network by which it is having [the user who registered]-4th step which acquires privilege according to point characterized.

TAILED DESCRIPTION

ailed Description of the Invention]

01]
ld of the Invention] About the system which manages User Information using a communication network, especially,
invention is accumulated in a database by considering the use situation of users, such as homepage perusal, goods
chase, etc. on the Internet, as the point (score), and relates to the system to manage.

02]
scription of the Prior Art] In a company etc., although a computer is used for the customer management system
ch manages a customer's information from the former, there are various phases in extent of use of a computer. As
st elementary phase, the information on the questionnaires (a telephone, FAX, letter, etc.) from a customer is
ually inputted into a computer, and there is a Customer Information Control System which totals. Moreover, when a
tomer purchases an article (purchase mainly according to a mail order), purchase frequency or the purchase amount
oney is managed by computer, and there is also a system used for subsequent selling activities.

03] Moreover, when a customer inputs a need matter into the entry form on the WWW homepage screen which a
pany etc. establishes and transmits to it by E-mail with the spread of the Internet in recent years in a company etc.,
data is stored in customer databases, such as a company, or the system which classifies the customer information
sex, age, an area, etc. further, and totals automatically also has it. Moreover, in the computer game on the Internet,
score of the game which the customer played is totaled and managed and there are some which display a final score
lt after game play termination of a predetermined period or the count of predetermined. Furthermore, the customer
o replied to the questionnaire when it replied to the questionnaire of a company etc. on the Internet acquires the point
ore) from a company, and when it is added and he becomes the predetermined point, he has the system which
omes the discount in the case of purchasing the specific goods of the company.

04] On the other hand, as accounting on the Internet, and a settlement system, there are an accounting system at the
e of perusing the charged contents of a company, and the settlement system according to a customer's credit card
en goods etc. are purchased at the market on the Internet and the system by which a credit firm collates a customer's
dit investigation automatically.

05]
blem(s) to be Solved by the Invention] However, the system which manages the conventional customer information
s built on the simple substance (stand-alone) or LAN, and when a customer registered his own data, the terminal of
lication connected to the host computer had to be used.

06] Although the system which, on the other hand, processes information offer, collection, and management of a
tomer or goods according to an individual about the bidirection service of an individual user and a company by
mmunication networks, such as the Internet using a public line, existed, the system which tied up each system
thetically did not exist. Therefore, even if the customer accessed the homepage of a company by the Internet and got
point (score) responding to a questionnaire or quiz, the use range of the point was applied only to the goods with
ich the company which accessed was restricted, and was not connected with an alien system.

07] Moreover, even if, as for the conventional system, the company collected information with means, such as
tomer registration, the information is only used for the selling purposes, such as goods of the company, and the
tomer did not offer individual humanity news positively in many cases. Moreover, in the homepage perusal on the
ernet, although the customer received various kinds of information, he lacked in the motivation that there are few
antages (incentive) except acquiring information, and they will carry out multiple-times access at the same
nepage. Then, in order that a customer may raise the volition of information offer, a company may give a customer
point, but when a customer added and used the point, it was valid for discount of the specific goods of the

pendent company etc.

8] Then, communication lines (Internet etc.) are used, if the terminal is connected to the communication line, it will be available even from where and service will be used, a use situation will be added to a customer database by the member ID number etc. as the point, and the purpose of this invention is to offer the customer point managerial system which gives privileges, such as discount at the time of the goods purchase of a system participating company etc., with the point.

9]

ans for Solving the Problem] If according to this invention a user accesses the homepage of a management organization or a participating organization using communication networks, such as the Internet, and the above-mentioned purpose transmits User Information, an ID number will be given to a user while the whole of the User Information is registered into the database of a management organization. Whenever a user peruses the homepage of a management organization or a participating organization, he can get the point (score) from next time, and this point is added automatically. A management organization can manage this point and it can solve by offering the system which gives a user the incentives (a premium, discount, participation, etc.) according to a user's point.

10]

Embodiment of the Invention] Hereafter, the example of the gestalt of operation of this invention is explained according to a drawing. However, the example of a gestalt of this operation does not limit the technical range of this invention.

11] [Electronic coupon structure-of-a-system] drawing 1 is the block diagram of the User Information point managerial system (it is hereafter called an electronic coupon system for short.) using the communication network by the gestalt of operation of this invention. The WWW server 28 of the system participating organization 30, 29 grades the WWW server 38 of the system participating organization 40, and 39 grades are connected to the WWW server 28, the mail server 24, and database 26 of the management organization 27 through the Internet 22, and the electronic coupon system is constituted. It connects with the WWW server 28 grade of the system participating organization 30 through the Internet 22, and a user 21 uses an electronic coupon system. Moreover, the mail server 24 of the management organization 27 is connected to the database 26 of the management organization 27 via the nondisclosure system 25 by SQL (Structured Query Language).

12] Since the use situation of service on the communication link of homepage perusal of the participating organization 30, goods purchase, etc. is memorized by the database 26 of the management organization 27 unitary according to this electronic coupon system, the participating organization 30 can check use situations, such as a self homepage, if the database 26 of the management organization 27 is accessed. Moreover, since the homepage of two or more participating organizations 30 is linked within an electronic coupon system, compared with the homepage which opens independently, access of the user to the homepage of the participating organization 30 can be increased only in the organization.

13] Thus, the participating organization 30 can receive access from many users rather than the time of having opened homepage independently by the ability putting User Information in a database in quantity by managing the user through the Internet service on the point, and the management organization 30 can check the access situation of the user to the homepage easily in the database 26 of the management organization 27, and can apply to future business expansion etc. Moreover, the point can fluctuate by using the Internet service and a user can obtain various kinds of in the FIBU with some of points.

14] In addition, although the system participating organization 30 has established the web linked to the homepage of the management organization 27, the system participating organization 40 has not established the web linked to the homepage of the management organization 27. However, the management organization 27 can choose the participating organization 40 as arbitration, can carry the address of the participating organization 40 to the homepage of the management organization 27, and can make it link from the homepage of the management organization 27.

15] In this case, the point is obtained, also when a user 21 makes it link from the homepage of the management organization 40 and the homepage of the participating organization 40 is perused. And although the management organization 27 can show the participating organization 40 the database which recorded the number of hits to the participating organization 40 etc. and can urge the participation to a system, even if it does not still participate forever, it is convenient in any way.

16] On the other hand, since the direction accessed from the homepage of the management organization 27 can obtain the point rather than carrying out direct access of the user 21 to the participating organization 40, it is considered that the incentive of access to the participating organization 40 increases. Moreover, if a user becomes the member of a system, since it can link also to the homepage of the participating organization 40 from the homepage of the

management organization 27, the participating organization 30 can surely get profits called the point at least.

17] [Procedure of user registration in management subject firm] drawing 2 shows the flow chart in the case of trying out user registration according to the gestalt of operation of this invention in the management subject firm 27. The procedure in which a user 21 is registered as a user of an electronic coupon system is as follows.

18] ** HP perusal user 21 peruses the homepage which is in the WWW server 23 of the management subject firm 27 through the Internet 22. It is made the screen as shown in drawing 3, and the user 21 who got interested in an electronic coupon system makes this homepage a configuration which opens the explanation screen of an electronic coupon system.

19] ** If the system explanation user 21 clicks the part of "being ? with an electronic coupon system" of a homepage shown in drawing 3, it will change to the explanation screen of an electronic coupon system as shown, for example in drawing 4. This explanation screen is made the configuration which the member registration screen of an electronic coupon system opens while it explains the outline of an electronic coupon system.

20] ** If the registration form entry user 21 clicks the part of "registration of a member" of the explanation screen shown in drawing 4, it will change to the screen which can perform member registration of an electronic coupon system shown, for example in drawing 5. The user 21 who wishes member registration inputs individual humanity news (an identifier, age, sex, hobby, etc.) according to registration form on this registration screen.

21] ** If the user 21 who filled in the registration form of the registration screen shown in e-mail receiving drawing 5 clicks a "transmitting" part, this individual humanity news will be received by the mail server 24 of the management subject firm 27.

22] ** Via the nondisclosure equipment 25 by SQL, in the database 26 of the management subject firm 27, the individual humanity news which received by the automatic registration mail server 24 is registered automatically, and is in a database.

23] ** If the ID number communication user 21 is registered as a member, an ID number will be automatically transmitted to a user 21 through the Internet 22, User Information will be checked in the management subject firm 27, and registration will be completed.

24] ** If registration is completed in the service available management subject firm 27 and an ID number is transmitted to a user 21, a user 21 can use service of an electronic coupon system using the ID number.

25] In addition, when a user 21 uses the charged contents of an electronic coupon system, it links with the WWW server 23, but when a user 21 uses registration or free contents, it is not necessary to link the accounting organization

26] [Procedure of user registration in system participating company] drawing 6 shows the flow chart in the case of trying out user registration according to the gestalt of operation of this invention in the system participating company 30. The procedure in which a user 21 is registered as a user of an electronic coupon system is as follows.

27] ** The homepage perusal user 21 peruses the homepage which is in the WWW server 28 of the system participating company 30 through the Internet 22. The explanation screen of an electronic coupon system is prepared on the contents of this homepage.

28] ** If the user 21 who got interested in a system explanation electronic coupon system opens the explanation screen of an electronic coupon system, this explanation screen will be made the configuration which the member registration screen of an electronic coupon system opens while it explains the outline of an electronic coupon system. However, a user 21 can also change a link from an explanation screen to the homepage of the management subject firm 27. If a link is changed to the homepage of the management subject firm 27, a subsequent registration procedure will be formed by the WWW server 23 of the management subject firm 27, as drawing 2 explained previously.

29] ** When the registration form entry user 21 wishes member registration, fill in individual humanity news etc. according to registration form on this registration screen, and change a link to the homepage of the management subject firm 27.

30] ** The individual humanity news entered in the registration form of an e-mail reception registration screen is received by the mail server 24 of the management subject firm 27 through the Internet, after a link changes to the homepage of the management subject firm 27. The subsequent procedure is the same as the registration procedure in the management subject firm 27.

31] As mentioned above, although there are a procedure directly received by the WWW homepage of the management subject firm 27 and a procedure received via the WWW homepage of the system participating company 30 for user registration, even if registered by which, the individual humanity news after registration is put in a database and stored in the database 26 of the management subject firm 27.

32] [Perusal of free contents of management subject firm] drawing 7 shows a flow chart in case a user 21 peruses the

contents of the management subject firm 27.

33] ** HP access user 21 accesses the homepage which is in the WWW server 23 of the management subject firm 27 through the Internet 22.

34] ** Since free contents as shown in drawing 8 are contained in the homepage of free contents *****, a user 21 choose the free contents which he wishes out of this.

35] ** If ID input user 21 chooses free contents and inputs a self ID number, a contents screen as shown, for example in drawing 9 is displayed, and degree page or subsequent ones can be perused. What the user 21 with this ID number perused this homepage for by the input of a user's 21 ID number is recognized by the WWW server 23 of the management subject firm 27.

36] ** e-mail **** -- it is received by the mail server 24 of the management subject firm 27, and this ID number goes along the nondisclosure equipment 25 by SQL, and is recorded on a database 26.

37] ** Since the point addition user 21 perused the homepage of the management subject firm 27, the point is added to the database 26 of the management subject firm 27.

38] ** The renewal user 21 of a web looks at free contents, and proposes a certain opinion and idea, and when trying the time of carrying the proposed product, the product with which the management subject firm 27 added the contents to the proposal, update a web.

39] ** The point check user 21 can check the self point, if a user's 21 ID number is inputted on the screen which lets Internet 22 pass, for example, is shown in drawing 10 .

40] ** Although the incentive exchange user 21 accumulates the point on the database 26 by perusing the free contents of the homepage of the management subject firm 27 etc., the incentives (premium etc.) according to the accumulation point which the user 21 acquired are indicated as goods concrete in the homepage of the management subject firm 27 as shows drawing 11 etc. Therefore, a user can exchange incentives, such as a premium, according to the point.

41] [Perusal of free contents of participating company] drawing 12 shows a flow chart in case a user 21 peruses the free contents of the participating company 30. In this case, although it is the same as that of the case where the free contents of the management subject firm 27 which shows drawing 7 are perused, almost, a user 21 is different in that IP access of the WWW server 28 of the participating company 30, ** free contents selection, and **ID input are performed through the Internet 22. After a link changes to the homepage of the management subject firm 27, ** mail reception of inputted User Information is carried out at the mail server 24 of the management subject firm 27. In addition, **ID input can also be performed by the WWW server 23 of the management subject firm 27, after a link changes to the homepage of the management subject firm 27.

42] [Perusal of charged contents of management subject firm] drawing 13 shows a flow chart in case a user 21 uses the charged contents of the management subject firm 27. In this case, although it is the same as that of the case where the free contents shown in drawing 7 are perused, almost, it is different at the point which serves as ** point reduction in the database 26 of the management subject firm 27 whenever it peruses charged contents. In addition, although a user 21 receives the fixed point at the time of member registration, if the point becomes zero, the perusal of charged contents of him will become impossible. However, if it registers with accounting organization, and accounts are settled with a credit card at every use or is settled about a small sum using a PURIPEDO system, perusal of charged contents is possible succeedingly.

43] [Perusal of charged contents of participating company] drawing 14 shows a flow chart in case a user 21 peruses charged contents of the participating company 30. In this case, although it is the same as that of the case where the charged contents of the management subject firm 27 which shows drawing 13 are perused, almost, a user 21 is different in that **HP access of the WWW server 28 of the participating company 30, ** charged contents selection, **ID input, and ** web perusal are performed through the Internet 22. After a link changes to the homepage of the management subject firm 27, ** mail reception of inputted User Information is carried out at the mail server 24 of the management subject firm 27. However, the user point is memorized and managed by the database 26 of the management subject firm 27.

44] [Operation of charged game] drawing 15 shows a flow chart in case a user 21 carries out a charged game. In this case, although it is the same as that of the case where the charged contents shown in drawing 13 and drawing 14 are used, almost, while becoming ** point reduction with ** game operation, also when becoming ** point addition according to ** game result, it is different at a certain point. And after a link changes to the homepage of the management subject firm 27, ** mail reception of the point after game termination is carried out at the mail server 24 of the management subject firm 27.

45] Although a user 21 receives the fixed point at the time of member registration, he can pay a fixed tariff and can

to obtain the point. With this point, a user 21 can play a computer game through a communication network. Although the point which came to hand per game play at the beginning is subtracted, the point is added according to the score of a game. A user can check the added point and incentives (premium etc.) and exchange are possible for it according to the point. In addition, when participating in the Internet charged game of the management subject firm 27, according to the point, it can participate for free.

46] [Reply of questionnaire] drawing 16 shows a flow chart in case a user 21 replies to the questionnaire of the participating company 30. In this case, although it is the same as that of the case where the free contents of the participating company 30 which shows drawing 12 are perused, almost, it is different in that perform **ID input and ** questionnaire input in the WWW server 28 of the participating company 30, and the database 26 of the WWW server 23 of the management subject firm 27 performs ** questionnaire total. After a link changes to the homepage of the management subject firm 27, ** mail reception of the inputted questionnaire information is carried out by the mail server 24 of the management subject firm 27. In addition, the example of the display screen has become like drawing 17, and a user 21 inputs a self ID number and replies to a questionnaire. One point per reply of one questionnaire is added, and the point is accumulated in the database 26 of the management subject firm 27.

47] [Participating to proposal box] drawing 18 shows a flow chart in case a user 21 participates in an idea proposal box. In this case, although it is the same as that of the case where it replies to the questionnaire shown in drawing 16, almost, it inputs into **HP access, **ID input, and ** proposal box in the WWW server 23 of the management subject firm 27, and is different at the point which totals ** proposal box in the database 26 of the management subject firm 27. It made a screen like drawing 19 and the management subject firm 27 proposes a concrete idea by the picture and the text, and a user 21 adds his idea to the idea, and contributes an idea proposal box to the "proposal box" of the management subject firm 27 at it. Although the point will be obtained if a user 21 writes for a proposal box, the rank of the point is decided according to the contents of the idea.

48] [Participating to chat] drawing 20 shows a flow chart in case a user 21 participates in a chat (talkative conference room). In this case, although it is the same as that of the case where it participates to the proposal box shown in drawing 18, almost, it is different in that perform ** chat input in the WWW server 23 of the management subject firm 27, and the database 26 of the management subject firm 27 performs ** chat total. The screen of a chat conference room is made like at drawing 21, is put up for the chat (talkative conference room) to which it is the intention of the management subject firm 27 or a user 21, and the management subject firm 27 establishes the idea contributed to the proposal box mentioned above, and the opinion of a member is heard or it points out an improving point. Although the point is obtained by the participation, the rank of the point can be decided according to the contents of participation.

49] [Use of database] drawing 22 is an explanatory view in case the system participating company 30 and a user 21 use the database 26 of the management subject firm 27. The system participating company 30 does whether customer information is directly printed out from a database 26, or the Internet 22 is used, and it checks on a web via the WWW server 28, and can check and use a customer database 26. On the other hand, a user 21 can check his own point on the point of the WWW server 28 through the Internet 22.

50] In addition, the electronic coupon system of this invention explains the application to ** which can be carried out with various gestalten which manage customer information, and the following.

51] If a [goods selling] customer uses the Internet, member registration is carried out at a customer database and goods are purchased by the WWW homepage of the system participating company on the Internet, the point will be added to a customer database. A customer can check the added point and incentives (premium etc.) and exchange are possible for it according to the point. Moreover, if the user who wishes to have the goods according to the accumulation of point specifies goods and it applies to a management subject firm through the Internet, the goods will be sent with other transportation means.

52] In addition, when purchasing goods from the market of the WWW homepage of a management subject firm, according to the point, it can purchase by discount to a zero price. On the other hand, although the settlement of amounts in the case of purchasing goods from the market of the WWW homepage of a participating company carries out with the participating company, the point according to the purchase price can be obtained. Moreover, if the participating company sells tickets, such as an airline ticket, and it will reserve via a management subject firm, the point according to it can be obtained.

53] Moreover, if a management subject firm or a participating company publishes a coupon with a password and a user presents this at the shop front of a participating company when a user uses the point as a discount coupon, the goods of a participating company can be purchased at a discount price of the rate according to the point.

54] [Contribution] management subject firm converts the point with a regular conversion rate, it can be made into the contribution to the existing fund etc. (WWF etc.), and a management subject firm pays a donation. On the other hand, when

ser contributes to the existing funds (WWF etc.) through a management subject firm, the donation can be converted to a fixed conversion rate, and it can consider as a user's point.

55] Moreover, a management subject firm can convert the point with a regular conversion rate, and can use for volunteer activities, such as various disaster. In this case, a management subject firm can participate in volunteer fund campaign, such as a TV program, can collect "volunteer point" campaign by the Internet, can convert that accumulation point with a fixed conversion rate, and can also contribute money and an object.

56] Users who received the most points out of all users periodically, such as a week and a monthly one, may enable to receive predetermined goods to come to hand by the ability giving the point and compatibility of a [other] participating company, such as another point system, and exchanging at the point and the rate of predetermined by the gestalt of operation of this invention. However, transference and transfer to the others are not accepted for the point.

57] [Effect of the Invention] According to this invention, User Information can be put in a database by carrying out point management of the user using the Internet service as explained above. Moreover, a user is using the Internet service, and point fluctuates and he can obtain various kinds of incentives with some of points.

58] Therefore, a system participating company can apply to future business expansion by using the customer information on a customer database by a user getting profits by various kinds of incentives.
